

# Will's Meld Calculator

July 2023

# Our Team

Will Bennett

Data Scientist with five  
years of experience in  
digital health

# The Goal

Beth Israel Deaconess Medical Center is looking to improve on their outcomes for patients with end stage liver disease.

# MELD

- ❑ Model for end stage liver disease
- ❑ Used to prioritize liver transplant patients
- ❑ Widely validated and accepted

○ 2001

A model is developed to predict survival, is proved to generalize well

○ 2008

Score is improved by including Sodium

○ 2021

Model is improved by including patient gender

11,000

Patients were included in this study including lab  
results and patient information

MELD Baseline: 0.76%  
C-stat

# Cohort Identification

Cirrhosis

Patients with explicit cirrhosis or liver disease

Alcohol Abuse

Patients admitted to the ICU with alcohol-related diagnosis

PSG/HEP

Related diseases including PSC (primary sclerosing cholangitis), Autoimmune hepatitis, & Chronic viral hepatitis

# Men outnumber women

Most of the patients are white

# There is a good variety of MELD Scores

MELD Score	Mortality
$\leq 9$	1.9%
10-19	6.0%
20-29	19.6%
30-39	52.6%
$\geq 40$	71.3%

# Two Approaches

## Integrated ML

Use all laboratory data and patient information and output a prediction.

0.85%  
C-stat

## Calculator

A simple calculator (inspired by MDCalc) is useful for clinicians to quickly input data and output a prediction.

0.82%  
C-stat

# Calculator demo

International Normalised Ratio (INR) Min

Anion Gap

Blood urea nitrogen (BUN) Min

Total Bilirubin Min

Age

Gender

Race

## Will's Modified MELD Calculator

Actual outcome:

☐ Survived

☒ Perished

### Patient Data:

INR Min	Anion Gap Min	BUN Min
2.3	13.0	16.0
Bilirubin Total Min	Age	Gender
11.1	76	Female
Race	HISPANIC/LATINO - PUERTO RICAN	

Model predicts person will die within 90 days:

**YES**

Likelihood to Die Within 90 Days

**78.7 %**

A circular icon with a blue background. Inside, there's a white medical monitor displaying a red ECG line. To the left of the monitor is a white speech bubble with a red 'i' icon. To the right is a white checklist with a red heart icon and three blue checkmarks. At the bottom, there are three red gears of different sizes.

# Recommendations

01

Implement simplified model in MELD calculator for a quick win

02

Investigate adding race to MELD calculator

03

Build out internal machine learning capabilities to implement integrated solution with more features to improve accuracy

# Next Steps

Work with medical professional to improve Cohort selection and model interpretation

Clinician Partnership

Investigate performance of model for different races to evaluate model bias

Investigate Racial Bias

Use OPTN data to investigate if model could replace MELD for liver transplant prioritization

Utilize OPTN

# Thanks
